

The **periodic table of EAV** (electro-acupuncture according to Voll) consists of a coherent and detailed set of measuring points of organs, acupuncture vessels and energy systems which are intended to provide a comparable language independent oversight of the measuring results of the individual cases.

I

II

The periodic table of EAV was originally published in [Naturheilpraxis 8/95](#). On the first **I** of the two A4 pages are all measuring points of the hands (1) and feet (2) including the 20th 3e inclusively the alarm and associated points (3), on the second **II** one all the other differentiating body measuring points. First you note the name and date (4), then the time of beginning, later the end of the measuring (5). After having noted the measuring results (in 1, 2 and maybe 3), the fields with the diverging values

< 45, > 65, indicator-drop, and normalized

(= returned into the norm) must be marked. Then follows a explaining conversation with the patient (contexts and priorities of the treatment). The professional can personally make a good use of the [organ watch](#) (9). It is also important to note big surgeries (8), i.e. Ektomie: BI F (for an hysterectomy). We continue with the preparation of the [medicament & biocompatibility test](#): we write the diverging measuring points, which we selected for the medicament test, on the same height of the line (11). Then we note the beginning of the medicament test (6), maybe also of the Nosode measuring (7), on the top (10 a, b, c, d) we note the tested samples (if possible with the allotment documentation number) and the results of the remedies/materials (10) in the sequence of the selected measuring points on the height of the corresponding lines (11).

III

Comparability of the development III: Later, after some consultations, you can lay one sheet beside the other and compare the marked colors, so you can check the development, so, the comparability is [worldwide](#) guaranteed and the traceability easy.

The EAV documentation standard

The classification of all measuring points fosters:

- comparing documentations at a glance (= practical approach)
- documenting uniformly and independently of operating systems without language restriction (= approach without loss of information)
- the most complete possible documentation of the multiplicity of the individual cases (= evidence based approach)
- promoting the [worldwide](#) information exchange between researchers, practitioners and patients (= communicative approach)
- facilitating [teaching](#) with the plausible systematics (= didactic approach)
- facilitating learning with interactive [atlases](#) (= learning oriented approach)
- disseminating this [diagnostic and medication selecting methodology](#) (= public health improving approach - entirely in the sense of Nefiodow).

The following two pages with the periodic system of EAV and a list of the classification of the MP H+F can be used freely for **handwriting documentation**. It exists also a universal [electronic version](#) of the Periodic System of EAV for the IT documentation of the practice activity. Moreover exists a special [statistics version](#) on request.

The integration in electronic systems, research projects, translations and publications (also only parts) needs the prior written authorization of the [author](#).

Intensive courses & seminars for students and professionals

for safely exploiting the potential of EAV especially involving the detailed documentation. With the EAV it is possible to detect and treat systematically causes and blocks as well as apply individual therapy concepts (monitor ongoing therapies and adapt remedies). It is also possible to diagnose and treat patients with physical disorders without sufficient organic findings (so called somatoform disorders) to chronic diseases and minimize [risks](#) of invasive procedures, including e.g. [image findings](#) (X-ray, ultrasound and magnetic resonance imaging etc.).

Ideal for travel and home visits

With the periodic table of EAV and a [basic measuring device](#) one is **always ready** to make a checkup.

Diff. ja

In the atlas is an [optimized print version](#) of these two pages
